

REMARKS

Claims 42, 70, and 71 have been amended so as not unduly to limit the means for measuring impedance to means which measures only before, during and after application of the voltage pulses when it would be clear to one of skill in the art, from the specification as filed, that the means could measure at any one of before, during and after. Similarly, the claims have been amended so as not to limit the measurement to a plurality of frequencies when it would be clear to one of skill in the art, from the specification as filed, that only one frequency need be measured (see specification at, for example, page 13, line 37 and page 20, lines 5-14).

Claims 84 and 85 have been added to recite features previously claimed in claims 42 and 70, respectively.

The patentable features have been pointed out in the previous amendment.

Respectfully submitted,
